

1. Scope Document

Project Title: Rotex Lead-to-Order-to-Invoice Digital Integration

Primary Platforms: Salesforce CRM & Salesforce Experience Cloud (Dealer Portal)

1.1 Objectives

- **Centralize lead capture, lead management, and dealer collaboration** within Salesforce to provide a unified platform for sales operations.
- **Enable dealers through the Dealer Portal** to manage leads, sales orders, Goods Receipt Notes (GRN), packing lists, and shipment status updates. *dealer can create non Rotex product items, LP for ROTEX and other product for their customer,*
- **Implement secondary customer approval workflows:**
 - Rotex products can only be sold to approved secondary customers.
 - Non-Rotex products can be sold to secondary customers without requiring Rotex approval.
- **Provide dealer performance and sales insights**, including product sales trend analysis, visit reports, and activity tracking.
- **Display dealer inventory visibility** within the Dealer Portal for products purchased from Rotex. *dealer's authorised person for given 9x can see inventory against all CP + RAL*
- **Allow quotation generation by Rotex** exclusively for approved secondary customers.
- **Integrate Salesforce with SAP** for quotation approval, sales order creation, and shipment tracking processes.
- **Synchronize invoice data from dealer ERP systems** into Salesforce to provide centralized visibility, reporting, and analytics. *optionally invoice in SFDC and we provide SFDC invoice data which they can push into thier software*
- **Deliver complete end-to-end traceability** across the sales lifecycle, from Lead → Quotation → Order → Shipment → Invoice.
- **Provide comprehensive reporting and dashboards** for Rotex management to monitor dealer performance, sales activities, inventory movement, order fulfillment, and revenue trends.

1.2 In-Scope Functionalities

A. Lead Management

- Rotex receives leads from multiple sources.
- All leads are stored and managed in Salesforce CRM.
- Leads are assigned or forwarded to dealers for follow-up.

B. Dealer Portal (Salesforce Experience Cloud)

- Secure dealer login and authentication.
- Dealers can view all assigned leads.

- Dealer actions include:
 - Lead qualification and validation
 - Lead conversion to Account and Contact
 - Lead status tracking
- Dealer can make request to add customer if Rotex authorize.

C. Dealer Quotation & End-Customer Order (Secondary Customer)

dealer can make ARC with customer for ROTEX product/s validity not more than 365 days but should follow calendar date

- **Enable dealers to create quotations** in the Salesforce Dealer Portal for approved secondary customers. *they should close SFDC qtn win/ loose and in case won PO copy and lost in that case with reason*
- **Allow both Rotex and Non-Rotex products to be included in quotations**, which can be shared with customers for review and approval.
- **Support customer approval tracking for quotations**, with status visibility maintained within Salesforce.
- **Allow Purchase Order (PO) creation to occur in dealer-managed external systems** following quotation approval, while maintaining a reference and tracking mechanism against the corresponding quotation in Salesforce.

D. Dealer → Rotex Order Submission

- Dealers submit quotations along with draft order details to Rotex via the Dealer Portal.
- Order information is captured and stored in Salesforce.
- Rotex reviews and approves the submitted quotation.

F. SAP Order Processing

- Approved quotations trigger order creation in Rotex SAP.
- SAP generates a unique SAP Order Number.
- The SAP Order Number is synchronized back to Salesforce.
- Dealers can view the SAP Order Number in the Dealer Portal.

G. Shipment & Tracking

- Rotex ships goods against the SAP Order.
- Shipment details, including tracking numbers, are updated automatically in Salesforce against the SAP Order Number via SAP Integration.

H. GRN & Packing List

- Dealers receive shipments from Rotex.
- Dealers create the following in the Dealer Portal:

- Goods Received Note (GRN)
- Packing List linked to the GRN
- The system generates a unique Packing Number for each packing list.

J. Invoicing & Salesforce Synchronization

- Dealers generate invoices in their respective ERP systems.
- Invoices include:
 - Packing Number
 - Order references
 - Product Category
- Invoice data is synchronized to Salesforce through integrations, including:
 - End-customer name
 - GST number
 - Products
 - Quantities sold
- Invoices are categorized under the following customer types:
 - Existing customers already mapped to the dealer
 - Cross-sell customers not mapped to the dealer
 - New customers not available in Salesforce (Open Text)
- Salesforce stores all invoice data for reporting, analytics, and audit purposes.

*considering complexity i find we should follow this path
i.e. their invoice + data to have ROTEX PICK List
we need to discuss abt DO and Dont's*

K. Inventory Management System

- Inventory tracking: Rotex CRM will keep track of all invoices which got synced from customer system to Dealer portal.
- Auto-replenishment: As soon system identify limited quantity on remaining stock, auto-replenishment will be triggered to place new orders.

L. External System Integration Options

- **Option 1: API Integration**
 - Dealers push data directly to Salesforce using APIs or
 - Salesforce pull the data from Tally

*let us understand by collecting data which they use for
pushing to govt portal for generating E invoice*

****Pointers discussed during BRD Review (04-06-2026)**

1. **Secondary Customer Master**
 - The approved Secondary Customer master data template will be provided by the Rotex team for initial data migration and setup.
2. **Product Master**
 - The Product Master template, including Rotex product details, will be provided by the Rotex team.
3. **Dealer Product Mapping**
 - Dealer-specific product codes must be mapped to the corresponding Rotex Product Codes to ensure consistency across transactions and reporting.
4. **Mandatory Customer Information**
 - Postal Code and GST Number shall be mandatory fields during customer creation.
 - City, State, and Country information must also be captured and maintained.
5. **Customer Profiling**
 - A Customer Profiling field will be introduced with values such as:
 - Rotex Products
 - Other Products
 - Both
 - Final picklist values will be provided by Abhijit. not clear
6. **Secondary Customer Attributes**
 - The complete list of fields and attributes required for Secondary Customers will be provided by Abhijit.
7. **Quotation Management**
 - Rotex Product Lines will be available for quotation through the Dealer Portal.
 - Dealers will also be allowed to add and quote non-Rotex products.
8. **Inventory Replenishment**
 - Auto-replenishment functionality shall be supported based on configured Minimum Quantity and Maximum Quantity thresholds.
 - Replenishment requests will require approval from designated dealer personnel.
 - Min/Max quantity configurations and approval tracking will be maintained within the Dealer Product Mapping records.
9. **Dispatch Tracking Integration**
 - Dispatch details shall be integrated through APIs from the order booking process in Salesforce.
 - Shipment and dispatch status will be visible to dealers through the Dealer Portal.
10. **Customer Complaint Management**
 - Dealers shall be able to create and track customer complaint tickets through the Dealer Portal.
11. **Order Purpose Classification**
 - Dealers shall specify the purpose of each order during order creation, such as:
 - Sale
 - Own Consumption

- Replenishment
- 12. Packing List Management**
 - Packing Lists shall be created and maintained against the corresponding Sales Orders.
- 13. Goods Receipt Note (GRN) Management**
 - GRNs shall be created and tracked against the corresponding Sales Orders.
- 14. Invoice Association**
 - Invoices shall be mapped and linked to the respective Packing Lists to maintain transaction traceability.
- 15. Tally Integration Risk Assessment**
 - A feasibility and risk assessment shall be conducted to evaluate potential data manipulation risks and integration considerations associated with Tally-based invoice synchronization.

1.3 Out of Scope

- Customization of dealer ERP systems.
- Integration with end-customer systems.
- Financial accounting and payment reconciliation.
- SAP internal customizations beyond agreed-upon interfaces.
- Order Management for all non-rotex products
